PHASE 3 – PROJECT DESIGN

Project Title

LegalEase – AI-Powered Legal Document Generator

1. **System Architecture**

LegalEase consists of a Streamlit frontend, FastAPI backend, Gemini AI, and document formatting modules.

User → Streamlit → FastAPI → Gemini AI → Generated Document → Preview/Edit → Download**

2. **Architecture Components**

* Streamlit – Provides the user interface.
* FastAPI – Handles backend requests.
* Gemini AI – Generates legal documents.
* Formatting Modules – Create TXT, DOCX, and PDF documents.

3. **User Interface Design**

The user can enter:

* Document Type
* Parties
* Terms
* Effective Date

The interface provides options to generate, preview, edit, and download the document.

4. **Module Design**

The main modules are:

* Frontend Module
* Backend Module
* AI Generation Module
* Document Formatting Module
* Preview and Download Module

5. **Data Flow**

The user enters the required information through the frontend. The information is sent to the backend, which uses Gemini AI to generate the legal document. The document is then displayed for preview and editing before downloading.

6. **Conclusion**

The project design defines the main components and workflow of the LegalEase system and provides a structure for developing the application.
