PHASE 7 – PROJECT DOCUMENTATION

Project Title

LegalEase – AI-Powered Legal Document Generator

1. Introduction

Project documentation describes the development, features, working process, and results of the LegalEase system.

2. Project Overview

LegalEase is an AI-powered system that generates customizable legal documents based on user-provided information.

3. Technologies Used

- Python
- Streamlit
- FastAPI
- Google Gemini AI
- python-docx
- FPDF

4. Main Features

- Legal document generation
- User input for document details
- Document preview
- Document editing
- TXT, DOCX, and PDF downloads

5. System Workflow

User Input → Streamlit → FastAPI → Gemini AI → Document Generation → Preview/Edit → Download

6. Project Results

The completed system generates legal documents based on the information provided by the user and provides options to preview, edit, and download the generated document.

7. Future Scope

The system can be further enhanced with deeper contract analysis and integration with legal databases.

8. Conclusion

LegalEase provides an AI-powered approach to generating customizable legal documents and aims to make the document crea
